# ================================================================================
# Process Name: Verification and Structural Integrity Test for AI Breadboard
# ================================================================================
# Description:
#   Automated diagnostic tool that verifies presence and integrity of all
#   required project directories, essential configuration files, Python
#   virtual environment binaries, and core package imports.
#
# Examples:
#   python verify_installation.py
#   python verify_installation.py --json
#   python verify_installation.py --project-root "C:\path\to\AI-Breadboard"
#
# File: skills/project-installer/scripts/verify_installation.py
# Project: AI Breadboard
# Package: Installation
# Module: Verification
# Class: InstallationVerifier
# Function: main
# Author: hypo69
# Copyright: © 2026 hypo69
# ================================================================================

# ================================================================================
# Process Name: IP Helper Native API Wrapper (iphlpapi.dll)
# ================================================================================
# Description:
#   Direct Ctypes wrapper for Windows IP Helper API (iphlpapi.dll).
#   Extracts active TCP/UDP connections mapped directly to owning PIDs
#   (GetExtendedTcpTable / GetExtendedUdpTable), adapter metrics, and DNS settings
#   with sub-millisecond latency and zero subprocess spawning.
#
# Examples:
#   >>> from apps.windows.api.nethelper import IPHelperAPI
#   >>> net = IPHelperAPI()
#   >>> tcp_conns = net.get_tcp_connections()
#
# File: nethelper.py
# Project: AI-Breadboard
# Package: apps.windows.api
# Class: IPHelperAPI
# Author: hypo69
# Copyright: © 2026 hypo69
