<#
.SYNOPSIS
    Wireshark and TShark installation and verification module for AI Breadboard.
.DESCRIPTION
    Checks whether tshark (part of Wireshark) is installed on the system.
    If absent, prompts user to install Wireshark via winget or provides download link.
    Also checks system PATH and verifies tshark version.

```
<#
.SYNOPSIS
    Check, install and run Google Antigravity CLI (agy).

.DESCRIPTION
    Script for checking Antigravity CLI (agy) presence in system, offering
    installation/update if missing, configuring API keys from .env and running
    interactive session or one-off requests to agent.

.PARAMETER Action
    Action to perform:
    - 'check': Check presence and status of agy CLI (default)
    - 'chat': Run interactive console session agy
    - 'models': Show list of available models (agy models)
    - 'update': Update agy utility to latest version (agy update)
    - 'version': Show utility version (agy --version)
    - 'status': Show current environment status

.PARAMETER Prompt
    Optional one-off text request to execute through agy --print.

.PARAMETER Model
    Model for request (default from config.json or agy-flash).

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\Run-Agy.ps1
    .\Run-Agy.ps1 -Action chat
    .\Run-Agy.ps1 -Action models
    .\Run-Agy.ps1 -Prompt "Explain Antigravity architecture"
    .\Run-Agy.ps1 --help

launchers/Run-Apps.ps1

Lines: 299 | Extension: .ps1

```
<#
.SYNOPSIS
    Universal multi-app orchestrator launcher for all /apps microservices.

.DESCRIPTION
    Starts, stops, restarts, or queries the status of all standalone microservices in /apps
    according to configuration in config_tc.json or config.json:
    - Windows System Administrator (Port 8100)
    - Network Analyzer Terminal (Port 8101)
    - System Inspector (Port 8102)
    - Exchange Trading Desk (Port 8103)
    - Cloudflare Tunnel Monitor (Port 8104)
    - Google Cloud Monitor (Port 8106)
    - Website Intelligence Monitor (Port 8107)

.PARAMETER Action
    Action to perform across all apps: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER NewWindow
    Launch all apps in visible standalone console windows.

.PARAMETER ConfigFile
    Configuration file to load app enablement from (default: config_tc.json or config.json).

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-Apps.ps1
    .\launchers\Run-Apps.ps1 -NewWindow
    .\launchers\Run-Apps.ps1 -ConfigFile config_tc.json
    .\launchers\Run-Apps.ps1 -Action status
    .\launchers\Run-Apps.ps1 -Action stop
#>

```
<#
.SYNOPSIS
    Standalone launcher for Cloudflared Monitor microservice / dashboard.

.DESCRIPTION
    Launches apps.cloudflared_monitor in background or standalone window with Uvicorn / Rich TUI.
    Listens on port 8104 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8104).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-CloudflaredMonitor.ps1
    .\launchers\Run-CloudflaredMonitor.ps1 -NewWindow
    .\launchers\Run-CloudflaredMonitor.ps1 -Mode dashboard -NewWindow

■ launchers/Run-Foundry.ps1

Lines: 177 | Extension: .ps1

```
<#
.SYNOPSIS
    Microsoft Foundry local server launcher and management.

.DESCRIPTION
    Script for checking, running and managing local Microsoft AI Foundry service.
    Uses CLI command 'foundry server start' and detects active port.
    Supports cross-platform execution with automatic environment configuration.

.PARAMETER Action
    start | stop | restart | status

.EXAMPLE
    .\Run-Foundry.ps1
    .\Run-Foundry.ps1 -Action restart
    .\Run-Foundry.ps1 -Action stop

.NOTES
    Ported from legacy batch scripts for Windows PowerShell execution.
    Automatically updates foundry_base_url in config.json on startup.

■ launchers/Run-GeminiCli.ps1

Lines: 312 | Extension: .ps1

```
<#
.SYNOPSIS
    Check, install and run Google Gemini CLI (@google/gemini-cli).

.DESCRIPTION
    Script for checking Gemini CLI presence in system, automatic offer to install
    via npm if missing, configuring API keys from .env and running interactive
    session or single requests.

.PARAMETER Action
    Action to perform:
    - 'check': Check presence and status of Gemini CLI
    - 'install': Install/update Gemini CLI via npm
    - 'chat': Run interactive console session
    - 'version': Show utility version
    Default: 'check'.

.PARAMETER Prompt
    Optional one-off text request to execute through Gemini CLI.

.PARAMETER Model
    Gemini model for request (default from config.json or gemini-2.5-flash).

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\Run-GeminiCli.ps1
    .\Run-GeminiCli.ps1 -Action install
    .\Run-GeminiCli.ps1 -Action chat
    .\Run-GeminiCli.ps1 -Prompt "Hello, tell me about the project"
    .\Run-GeminiCli.ps1 --help

Lines: 207 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone launcher for Helpdesk Support Desk microservice.

.DESCRIPTION
    Launches apps.helpdesk in background or standalone window with Uvicorn.
    Listens on port 8110 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'tui' (interactive console).

.PARAMETER Port
    Server bind port (default: 8110).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-Helpdesk.ps1
    .\launchers\Run-Helpdesk.ps1 -NewWindow
    .\launchers\Run-Helpdesk.ps1 -Action status

```
<#
.SYNOPSIS
    Launch lightweight local server for ai-breadboard project.

.DESCRIPTION
    Activates virtual environment, frees port if needed and runs local FastAPI/uvicorn
    server in lightweight mode (1 worker, no external tunnels).

.PARAMETER mode
    Host binding mode:
    - '0.0.0.0' (default): available from all network interfaces and devices on local network
    - 'localhost': available only locally (127.0.0.1)

.PARAMETER port
    Server port (default 8000 or from config.json).

.PARAMETER Help
    Display usage help for script (-Help, -h, --help, -?).

.EXAMPLE
    .\Run-LightServer.ps1
    .\Run-LightServer.ps1 -mode 0.0.0.0
    .\Run-LightServer.ps1 -mode localhost
    .\Run-LightServer.ps1 -mode 0.0.0.0 -port 8000
    .\Run-LightServer.ps1 --help
#>

[CmdletBinding()]

■ launchers/Run-NetworkTerminal.ps1

Lines: 208 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone launcher for Network Analyzer Terminal microservice.

.DESCRIPTION
    Launches apps.network_terminal in background or standalone window with Uvicorn.
    Listens on port 8101 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8101).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-NetworkTerminal.ps1
    .\launchers\Run-NetworkTerminal.ps1 -NewWindow
    .\launchers\Run-NetworkTerminal.ps1 -Mode dashboard -NewWindow
    .\launchers\Run-NetworkTerminal.ps1 -Action status

launchers/Run-SystemControlCenter.ps1

Lines: 207 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone launcher for Windows System Control Center microservice.

.DESCRIPTION
    Launches apps.system_control_center in background or standalone window with Uvicorn.
    Listens on port 8109 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8109).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-SystemControlCenter.ps1

launchers/Run-TelegramBot.ps1

Lines: 214 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone Telegram bot launcher for ai-breadboard.

.DESCRIPTION
    Launches scripts/dev/bot_runner.py in background.
    Reads TELEGRAM_BOT_TOKEN from .env, validates environment and
    manages the bot process lifecycle.

.PARAMETER Foreground
    Run the Telegram bot directly in current console/terminal without detaching.
    Aliases: -f, -Interactive, -Console.

.PARAMETER NewWindow
    Launch bot in a visible standalone console/terminal window with -NoExit.
    Aliases: -Window, -SeparateWindow.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-TelegramBot.ps1 -Action start
    .\launchers\Run-TelegramBot.ps1 -NewWindow
    .\launchers\Run-TelegramBot.ps1 -Foreground
    .\launchers\Run-TelegramBot.ps1 -Action stop
    .\launchers\Run-TelegramBot.ps1 -Action status
#>

launchers/Run-Terminals.ps1

Lines: 202 | Extension: .ps1

```
<#
.SYNOPSIS
    Multi-terminal workspace launcher for AI Breadboard and trading desks.

.DESCRIPTION
    Launches orchestrated terminal sessions in a single Windows Terminal (wt.exe) window
    with split panes (Grid / Horizontal / Vertical) or multi-tab layout.
    Falls back gracefully to standalone console windows if Windows Terminal is not installed.

.PARAMETER Preset
    Layout preset to launch:
    - 'breadboard': Server, Assist CLI, Telegram Bot, and Logs
    - 'trading': Market Orderbook & Ticker desk, Positions, Execution logs
    - 'custom': Interactive selection menu
    Default: 'breadboard'.

.PARAMETER Layout
    Pane layout style: 'grid', 'split', 'tabs', 'windows'.
    Default: 'grid'.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-Terminals.ps1
    .\launchers\Run-Terminals.ps1 -Preset trading
    .\launchers\Run-Terminals.ps1 -Preset breadboard -Layout tabs
    .\launchers\Run-Terminals.ps1 --help

■ launchers/Run-TradingTerminal.ps1

Lines: 226 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone launcher for Exchange Trading Terminal microservice / TUI desk.

.DESCRIPTION
    Launches apps.trading_terminal in background or standalone window with Uvicorn / Rich TUI.
    Listens on port 8103 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8103).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Symbol
    Trading pair symbol (default: BTC/USDT).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-TradingTerminal.ps1
    .\launchers\Run-TradingTerminal.ps1 -NewWindow
    .\launchers\Run-TradingTerminal.ps1 -Mode dashboard -NewWindow
    .\launchers\Run-TradingTerminal.ps1 -Action status

■ launchers/Run-Unicorn.ps1

Lines: 420 | Extension: .ps1

```
<#
.SYNOPSIS
    Launch FastAPI server via uvicorn (Unicorn) for ai-breadboard project.

.DESCRIPTION
    Activates virtual environment, loads parameters from config.json and .env,
    frees port, applies SSL if needed and runs FastAPI server in current
    PowerShell window.

.PARAMETER HostAddress
    IP address for binding (e.g.: 0.0.0.0 or 127.0.0.1).
    Aliases: -Host, -Address, -IP, -Host_.

.PARAMETER Port
    TCP port for server (e.g.: 8000).

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\Run-Unicorn.ps1
    .\Run-Unicorn.ps1 -Host 127.0.0.1 -Port 8000
#>

■ launchers/Run-WebsiteMonitor.ps1

Lines: 207 | Extension: .ps1

```
<#
.SYNOPSIS
    Standalone launcher for Website Intelligence Monitor microservice (GA4 & GSC telemetry).

.DESCRIPTION
    Launches apps.website_monitor in background or standalone window with Uvicorn.
    Listens on port 8107 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8107).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-WebsiteMonitor.ps1
    .\launchers\Run-WebsiteMonitor.ps1 -NewWindow
    .\launchers\Run-WebsiteMonitor.ps1 -Action status
    .\launchers\Run-WebsiteMonitor.ps1 -Action stop

<#
.SYNOPSIS
    Standalone launcher for Wikipedia Research Lab microservice.

.DESCRIPTION
    Launches apps.wikipedia_research in background or standalone window with Uvicorn.
    Listens on port 8110 by default.

.PARAMETER Action
    Action to perform: 'start' (default), 'stop', 'restart', 'status'.

.PARAMETER Mode
    Operation mode: 'server' (FastAPI microservice, default) or 'dashboard' (TUI).

.PARAMETER Port
    Server bind port (default: 8110).

.PARAMETER HostAddress
    Server bind address (default: 127.0.0.1).

.PARAMETER Foreground
    Run directly in current console/terminal without detaching.

.PARAMETER NewWindow
    Launch in a visible standalone console/terminal window with -NoExit.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\Run-WikipediaResearch.ps1
    .\launchers\Run-WikipediaResearch.ps1 -NewWindow
    .\launchers\Run-WikipediaResearch.ps1 -Action status
    .\launchers\Run-WikipediaResearch.ps1 -Action stop

■ launchers/ShowHide-InTray.ps1

Lines: 453 | Extension: .ps1

```
<#
.SYNOPSIS
    System tray companion and window visibility manager for AI Breadboard.

.DESCRIPTION
    Provides Windows System Tray integration for console and application windows.
    Enables minimizing or hiding active console windows into the system tray,
    intercepting accidental window closure, and controlling application lifecycle
    via an interactive tray icon and context menu. Automatically loads brand
    icons from webinterface assets (favicon.ico / icon48.png / icon256.png).

.PARAMETER Action
    Operation to perform: 'start' (init tray icon and hooks), 'hide', 'show', 'toggle', 'stop', 'status'.
    Default: 'start'.

.PARAMETER WebUrl
    Target URL opened when selecting 'Open Web UI' from tray menu.
    Default: 'http://localhost:8000/admin'.

.PARAMETER Title
    Tooltip and notification title for system tray icon.
    Default: 'AI Breadboard'.

.PARAMETER IconPath
    Optional path to custom icon (.ico or .png). If not specified, automatically
    discovered from webinterface assets.

.PARAMETER HideNow
    Immediately hide the console window upon initialization.

.PARAMETER DisableCloseButton
    Disable the console system menu close button ([X]) to prevent accidental process termination.

.PARAMETER Help
    Display usage help for script (-Help, -h, --help).

.EXAMPLE
    .\launchers\ShowHide-InTray.ps1
    .\launchers\ShowHide-InTray.ps1 -Action hide
    .\launchers\ShowHide-InTray.ps1 -Action show
    .\launchers\ShowHide-InTray.ps1 -WebUrl "http://localhost:8000/admin" -DisableCloseButton

 3 | # Process Name: Cross-platform FastAPI server launcher with setup
 4 | # ================================================================================
 5 | # Description:
 6 | #   Main launcher for starting FastAPI server with interactive setup options.
 7 | #   Ported from legacy run.ps1 with support for Windows, Linux and macOS.
 8 | #   Provides virtual environment detection, dependency checking, port management,
 9 | #   and configuration setup with both interactive and non-interactive modes.
10 | #
11 | #   Usage:
12 | #       python launchers/run.py
13 | #       python launchers/run.py --host 0.0.0.0 --port 8000
14 | #       python launchers/run.py --non-interactive

```
<#
.SYNOPSIS
    PowerShell script for running ai-breadboard / AI Breadboard tests.

.DESCRIPTION
    Test runner script for executing pytest with optional coverage reporting,
    verbose output, marker filtering, and automatic HTML coverage report opening.
    Supports virtual environment activation and cross-platform execution.

.PARAMETER Coverage
    Enable code coverage reporting (generates HTML and XML reports).

.PARAMETER Verbose
    Display verbose test output (-v flag).

.PARAMETER Markers
    Run only tests matching specified pytest markers.

.PARAMETER OpenCoverage
    Automatically open HTML coverage report in browser after tests complete.

.EXAMPLE
    .\run_tests.ps1
    .\run_tests.ps1 -Coverage -OpenCoverage
    .\run_tests.ps1 -Verbose -Markers "unit"
    .\run_tests.ps1 -Coverage -Verbose

# Process Name: Initial Administrator User Creation Script
# ================================================================================
# Description:
#   Sets up, initializes, or updates the initial administrator user account
#   in the SQLite users database (src/user_manager/users.db). Supports both
#   interactive input and headless/non-interactive configuration.
#
# Usage Examples:
#   python scripts/create_initial_user.py
#   python scripts/create_initial_user.py --non-interactive
#   python scripts/create_initial_user.py --email admin@domain.com --name SuperAdmin --password secret

Lines: 112 | Extension: .ps1

```
<#
.SYNOPSIS
  Create GitHub repository (using gh CLI or provided remote) and push current workspace, then attempt to register the project on Read the Docs using API token.

.DESCRIPTION
  This script automates two actions that require your credentials/tools:
  1) Create and push a GitHub repository named by -RepoName using gh CLI (or push to provided remote URL).
  2) Register a project on Read the Docs using READTHEDOCS_API_TOKEN (or -RtdToken parameter) via API.

  The script does NOT store any tokens. You must provide them via environment variables or parameters.

.PARAMETER RepoName
  Repository name to create on GitHub and RTD (default: AI-Breadboard).

.PARAMETER Branch
  Branch to push (default: main).

.PARAMETER RemoteUrl
  Optional explicit remote URL (ssh or https). If provided and gh CLI is not available, the script will set this remote and push.

.PARAMETER RtdToken
  Read the Docs API token. If omitted, the script will use environment variable READTHEDOCS_API_TOKEN.

.EXAMPLE
  ./create_and_register.ps1 -RepoName AI-Breadboard

  Requires: gh CLI (recommended) and git. For RTD registration requires a Read the Docs API token in env READTHEDOCS_API_TOKEN.
#>
