## ■ Purpose
Provide specialized agent capability for: {user_prompt}

## ■ When to Use & Triggers
- Activate when the user requests actions related to: {user_prompt}.
- Agent should consult this skill before delegating tasks or running manual routines.

## ■ Execution Protocol
1. **Analyze input request**: Validate preconditions and extract parameters.
2. **Execute actions**:
   - Check if scripts in `scripts/` provide helper automation.
   - Refer to guidelines in `references/` if edge cases are encountered.
3. **Format output**: Deliver results in structured markdown with clear status indicators.

## ■■ Rules & Constraints
- Maintain fail-fast validation and English logging.
- Handle missing files or external tool errors gracefully.
"""

# ================================================================================
# Process Name: FastAPI Network Traffic and Packet Analysis Router
# ================================================================================
# Description:
#   FastAPI HTTP and WebSocket endpoints for listing capture interfaces,
#   reading PCAP captures, streaming live TShark packets, and running AI anomaly analysis.
#
# Examples:
#   >>> from fastapi import FastAPI
#   >>> from src.api.router_network import init_router
#   >>> app = FastAPI()
#   >>> app.include_router(init_router())
#
# File: router_network.py
# Project: ai-breadboard
# Package: src.api
# Author: hypo69
